

## Did You Know?

### State law protects residents from snooping drones

Residents have voiced some concerns about the use of drones in Sabal Point. Florida law prohibits the use of drones to capture images of privately owned property or the owner, tenant or occupant of such property. If a drone flies over your property, you are to report the incident to local law enforcement and the Federal Aviation Administration. You are not allowed to shoot at a drone flying over your property because it is protected under the Aircraft Sabotage Act. Violators can be fined and imprisoned for up to 20 years.
